Lower Bound:

Let (S, \preceq) be a poset and let $A \subseteq S$. If l is an element of S such that $l \preceq a$ for all elements $a \in A$ then l is a *lower bound* of A .

Greatest Lower Bound:

An element x that is a lower bound on a subset A and is greater than all other lower bounds on A is called the *greatest lower bound* on A . We abbreviate “glb”.

Note: The greatest lower bound of $a, b \in S$ is denoted as: $a \star b$ (or) $a . b$ (or) $a \wedge b$ and read as meet or product of a and b .
